

Wearable Computing - an overview -

Prof. Dr. Touradj Ebrahimi
Touradj.Ebrahimi@epfl.ch

Generation-0 (smart) wearables

Fitness trackers as wearables

- Three current alternatives to wrist based wearable devices
 - Second screen
 - Sensors
 - Communication hub

How Google GLASS works

Why can you see a sharp image?

- There is far more in wearable computing than the device alone

BIG DATA ANALYTICS

- (A lot of) Data from users and their environments is needed to create compelling products and services based on wearable and IoT technologies

- (Easily available)
Wearable devices and sensors are needed to generate the data:
 - Affordable components and sensors to be purchased by interested individuals
 - Reliable
 - Easy to configure and calibrate
 - User friendly

- (Efficient) Software to control wearables and sensors
 - Open source
 - Extensible
 - Reliable
 - Easy to install on a wide variety of platforms

- (Distributed) server architecture for data synchronization, storage and access:
 - Cloud based
 - Reliable
 - Scalable
 - Respectful of Privacy and Ethical issues

- (Open) Standard solutions
 - Standard components
 - Standard data syntax
 - Standard Interface
 - Compliance/Certification

- Concrete use cases
 - Dietary assessment
 - Life log
 - ...

- A seed consortium from US, Japan and Switzerland in place and has initiated reflections on Multimedia Dietary Assessment as a potential killer app

- Watches and wrists are not the only battle fields in wearables
 - It may have started with wrist and face, but it won't stop there!
 - The entire body (and its immediate environment) is the play ground!
- Lessons to be learned from fashion/clothing industry
 - Design and fashion matter
- The device alone does not mean much without compelling applications
 - Wellbeing/Health
 - ...
